The next era

of cardiac ablation

Together VT is the European congress dedicated to high-level education in the field of ventricular arrhythmia diagnostic, prevention, prognostic evaluation and treatment with special focus on ablation therapy. Therefore, a strong partnership with industry to convey the central messages of our international expert faculty is needed.

The scientific committee chaired by Prof. Thomas Deneke (Nuremberg) encourages our industry partners to participate in the educational process as educational partners. In addition to conventional industry support we have created dedicated educational partnership programs that include travel, on-site experience and interaction with experts in the field of VT management and care organization for European fellows to participate in this 2-day learning experience.

Our VT Educational Partners will have the intended chance to engage and interact with fellows from all over Europe at a dedicated venue during the Together VT symposium. There is also the opportunity for discussion and scientific elaborations with the expert faculty on site.
